# FLOWING CLEAN

**Communities  
taking  
responsibility for  
the Soufriere River  
System**

A project by  
Caribbean Student Environmental Alliance Inc./  
WaterWays

# GOAL

To develop and sustain a strong community pride as the basis for addressing pollution and to complement this by establishing a system for the effective control and management of pollution in the Soufriere Watersheds.

## Project Objectives

- Development and Implementation of a Charter for the Management of Pollution
- Sustained public education and awareness campaign
- Prefeasibility study of management options for sewage and other liquid waste
- Prefeasibility study on composting facility and biofuel production in Soufriere
- Community microgrants
- Establish community pollution monitoring system including Adopt a River and installation of a Litter Boom in the Soufriere River
- Establish a system for marine trash management in Port Soufriere
- Review and Training on pollution legislation
- Epidemiology study on cancer incidence and prevalence.
- Water quality testing and mapping

THE TIME IS NOW
